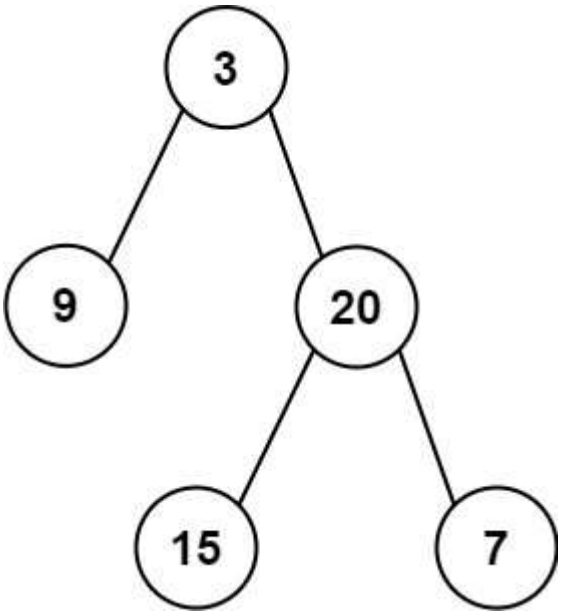
Construct Binary Tree From Inorder and Preorder Traversal

Given two integer arrays preorder and inorder where preorder is the preorder traversal of a binary tree and inorder is the inorder traversal of the same tree, construct and return *the binary tree*.

Example 1:



Input: preorder = [3,9,20,15,7], inorder = [9,3,15,20,7]

Output: [3,9,20,null,null,15,7]

Example 2:

Input: preorder = [-1], inorder = [-1]

Output: [-1]

Constraints:

- 1 <= preorder.length <= 3000
- inorder.length == preorder.length
- -3000 <= preorder[i], inorder[i] <= 3000
- preorder and inorder consist of **unique** values.
- Each value of inorder also appears in preorder.
- preorder is **guaranteed** to be the preorder traversal of the tree.
- inorder is **guaranteed** to be the inorder traversal of the tree.
